

Products That Make Cents!

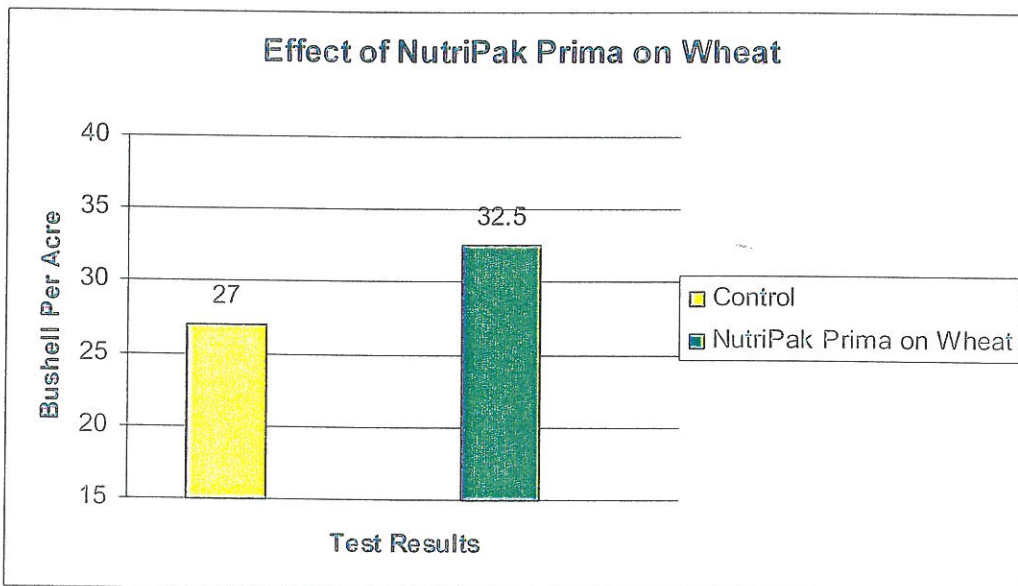

Researcher: Ken Branine
Location: Harrold, South Dakota
Test Year: 2006

Crop Tested: Winter Wheat
Plant Population: NA
Irrigation Method: Dry
Hybrid Variety: NA

Treatments/Applications: One application of 24 oz NutriPak Prima was applied as foliar spray with Harmony GT application.

Conclusion: Research was conducted on 100 acres during a critically dry year. Each plot had the same treatment with the exception of the applied NutriPak on 50 acres and a Control of 50 Acres. NutriPak had increased yields of 5.5 bushels making a total of 32.5 bushels to the acre. While check plots yielded 27 bushels to the acre.

Notes: Complete details on all mentioned test results are available upon request. Timing and rates of application are important for maximum results. For specific usage and application rates, ask for AgXplore research information sheets.
